2. Part two : A) Read the following passage then choose the best answer to the questions below . (2) points each .

Early humans watched their fires blacken the ceilings of the caves where they lived . They saw blue and red in the sky and brown and green on the ground . In time , people began to understand that color not only made the world more beautiful , it was also able to convey emotions and symbolize power . Using colors they extracted from insects , plants and minerals , primitive humans copied animals , painting their bodies to signal aggression toward an enemy or to attract a mate . Over the centuries , the source of colors such as blue , purple , and red were carefully guarded and were often worth as much as gold . In the 19th century a young chemisrty student became the first to manufacture a synthetic day and suddenly the world become a much more colorful place . By the 20th century , as scientists discovered the psychological effects of colors , everyone from advertisers to educators found ways to make use of color to influence our feelings and behavior .

2. Part two : A) Read the following passage then choose the best answer to the questions below . (2) points each .

A solar eclipse occurs when the Moon moves in front of the Sun and hides at least some part of the Sun from the Earth . In a partial eclipse , the Moon covers part of the Sun . In an annular aclipse , the Moon covers the center of the Sun , leaving a bright ring of light around the Moon . In a total eclipse , the Sun is completely covered by the Moon . It seems rather improbable that a celestial body the size of the Moon could completely block out the tremendously immense Sun , as happens during a total eclipse , but this is exactly what happens . Although the Moon is considerably smaller in size than the Sun , the Moon is able to cover the Sun because of their relative distances from the Earth . A total eclipse can last up to 7 minutes , during which time the Moon's shadow moves across the Earth at a rate of about 6 kilometers .

2. Part two : A) Read the following passage then choose the best answer to the questions below . (2) points each .

Animals and plants are in constant battle for survival as they compete for limited sources against other living things. Those animals and species that can adapt to the challenges of their environment will survive. Those that are not capable of adapting will not live. Different animals use different ways of coping in their environment. For example, the prey sometimes use camouflage , such as changing colour to protect themselves. Some birds can mimic other birds and so defend their nests from predators by copying the song of a stronger or more dangerous bird. Disguises like these allow many animals to mature, safe from predators until they are old enough to defend themselves .

2. Part two : A) Read the following passage then choose the best answer to the questions below . (2) points each .

The human heart is divided into four chambers . The atria are the thin – walled upper chambers that gather blood as it flows from the veins between heartbeats . The ventricles are the thick , walled lower chambers that receive blood from the atria and push it into the arteries with each contraction of the heart . The left atrium and ventricle work separately from those on the right . The role of the chambers on the right side of the heart is to receive oxygen – depleted blood from the body tissues and send it in to the lungs , the chambers on the left side of the heart then receive the oxygen – enriched blood from the lungs and send it back out the body tissues .

2. Part two : A) Read the following passage then choose the best answer to the questions below . (2) points each .

Bats are classified as mammals because they give birth rather than laying eggs . They sleep in the day and fly at night . They have long fingers and stretched wings . The bat's wing looks like the human hand . Almost 1000 bat kinds can be found world wide . Bats can be found anywhere in the world except the polar regions and deserts . However , the number of some bats are dangerously low or in decline . About 70 % of bats eat insects . There are also fruit – eating bats , and the blood – sucking bats of South America . Some bats have a strong sense of hearing , they emit sounds that reflect off objects in their path , called echoes . From echoes of the sounds they emit , bats can determine the size of objects , how far away they are and how fast they are flying , all in a split of a second .

Camels belong to the same family as llamas , alpacas and guanaces . However , camels are distinguished form llamas , which are larger than alpacas , by their largest size . There are two types of camels ; the Arabian camel , or dromedary , which has a single hump , and the Bactrian , or Asian camel , which has two humps on its back . The Arabian camel lives mainly in the middle East, Africa and India , whereas the Bactrian lives in the high lands of central Asia . Camels stand on four flat feet , each foot has two hoofed toes . An adult camel weighs 650 kg and about 2 meters tall . The hump , which is made of fat is used to store water and food .

There were many important changes , both technological and cultural during the twentieth century . However the most important of those is the advances that were made in medical science . The development of vaccines , antibiotics and all things that improve and save the lives of people all round the world . Each year there are about 515 million cases of malaria killing between one to three million people . Most deaths occur in young children . Malaria is caused by parasites carried by an infective female anopheles mosquito . There are four kinds of malaria parasites which can infect human . Doctors proved that malaria isn't a contagious disease and doesn't spread from person like a cold or the flu . Malaria transmission of infection and ve reduced and treated by preventing mosquito bites , it is by using mosquito nets or using anti – malaria drugs that treat the infection . However , parasites have evolved to be resistant to many of these drugs . Therefore , no vaccine is currently available for malaria.
